State Certified Sunshine Cotton Seed

State Inspection—Your Protection

The purpose of the Field Seed Certification is to establish sources of pure bred planting seed true to varietal name, for the benefit of the purchaser.

Insist on knowing the quality of the seed you are planting.

Look For The Official Blue Tag

Sunshine Cotton is of a Rowden strain, improved by years of careful and scientific breeding under the authorized agents of State Department of Agriculture.

Sunshine Cotton is noted for its early maturity, and unusual drouth resisting qualities.

Sunshine Cotton has been tested and proven over a period of years and

found to produce uniformly good results, and with its heavy field yield, it will make you "more dollars per acre".

Its early maturity and sparse foliage both help fight the boll weevil and other pests.

It is a cotton running even in staple length, having a strong fiber of smooth character, averaging an inch and better, with a turnout of 35 to 38 per cent.

STATE CERTIFIED PLANTING SEED
This is to certify that the 1935 fields of the firm named hereon have been inspected by a duly authorized State Inspector and found to conform to the standards of varietal purity and uniformity established by the State Seed and Plant Board.
The sack of seed bearing this tag is from such approved fields and the seed have been harvested and otherwise handled in accordance with State regulations.
Penalty
When any person falsely advertises or proclaims himself a registered plant breeder or certified seed grower, or advertises for sale State registered seed or State certified seed without first complying with the provisions of this act, or uses any emblem or wording so as to mislead the purchaser into believing that he is buying State registered planting seed or State certified seed, or who tells a purchaser that the seed sold are registered planting seed or certified planting seed, when they are not, or in anywise leads the purchaser to believe that the seed sold are registered planting seed or certified planting seed, when they are not, he shall be deemed guilty of swindling.
Important: —The Texas Registration and Certification Act deals strictly with the varietal purity of field seed, and does not give specific evidence as to germination. The germination of all agricultural field seed offered for sale is covered by separate law known as the Texas Seed Act and the tag required by this law should be examined for such information.
